

## NORMTEK IS NOW SERVICING THE OIL AND GAS INDUSTRY

With experience which dates back to Alberta's first wellbore to containing NORM, NormTek can meet all your NORM management needs.

### NORM SERVICES INCLUDE:

- Radiation assessments, surveys and monitoring
- Onsite radiation safety services for well workovers, turnarounds and other maintenance activities
- NORM waste classification, decontamination, transport and disposal
- Mobile laboratory for sample analysis, dose monitoring, radon gas testing and Low Level Radioactive Dusts (LLRD) monitoring
- Radiation protection training, radiation safety program development and regulatory compliance consulting

### MOBILE LABORATORY

With a fully equipped lab, radiochemical analysis can be performed onsite with a HPGe spectrometer to ensure transport compliance. In addition, the lab comes set up with personal electronic dosimeters, radon gas test kits, air monitors, alpha particle counter, intrinsically safe gamma radiation and contamination survey meters, radiation protection PPE and swipe testing equipment. Through the utilization of this equipment the on-site radiation safety officer is capable of providing the necessary documentation required by regulators ensuring OH&S compliance.

### WASTE COLLECTION

NormTek owns and operates a fleet of specially engineered vacuum boxes designed for collection and containment of NORM wastes generated from your turnaround and maintenance activities.

### TUBING DECONTAMINATION

NormTek utilizes a closed loop system to decontaminate NORM impacted tubulars using Ultra High Pressure Hydroblasting with pressures up to 40,000 PSI. The closed loop system eliminates potential NORM exposures to workers and the environment.
